

Benjamin Sanchez Zebadua

Ottawa, ON | 416-729-8100 | benjaminsz.work@gmail.com | <https://benjaminsz.com>

PROFESSIONAL STATEMENT

Frontend Infrastructure Engineer & Solutions Architect with 10+ years' experience scaling high-volume banking technology and FinTech platforms. Expert in monorepo management, developer enablement pipelines, and web performance optimization. Proven track record executing complex legacy migrations and governing scalable design systems.

EDUCATION

- **Postgraduate in Financial Planning & Wealth Management**
 - Lambton College, Ottawa, Ontario (Sept 2024 - Apr 2026)
 - **B.Eng. Information and Communication Technologies**
 - Universidad de Tecamac, State of Mexico (Sept 2007 - Aug 2011)
-

SKILLS AND CERTIFICATIONS

- **Frontend Infrastructure & Architectural Patterns:** Monorepo Architecture, Micro-frontends, Build Tooling Optimization, Web Performance (Core Web Vitals), Module Federation, Full-Stack Web Development, Single Page Applications (SPA), System Architecture, Distributed Frameworks.
 - **JavaScript Frameworks & Core Environments:** JavaScript (ES6+), TypeScript, ReactJS, Next.js, Web Components, Node.js, Framework Lifecycle Management.
 - **AI Architecture & Automation:** Python, Localized LLM Frameworks (Ollama), AI Agent Workflows, Spec-Driven Development (SDD), Prompt Optimization, GitHub Copilot Automation.
 - **DevOps, Build Systems & Automated Pipelines:** CI/CD Pipelines, Jenkins (Jenkinsfile pipelines), Docker Containerization, GitHub Actions, Build Tooling (Webpack, Vite, Turborepo), Version Control (Git, GitHub, Bitbucket), custom scripts (npm, bash).
 - **Code Governance, QA & Advanced Profiling:** Chrome DevTools (Advanced Performance Profiling), Accessibility Testing (WCAG Compliance), Quality Integration Gates, Selenium E2E, Mocha, Chai.
 - **UI Engineering & Atomic Styling:** Semantic HTML, CSS3, SASS, LESS, Bootstrap, Atomic Design Systems, Shared Library Versioning.
 - **System Integration & Data Funnels:** RESTful APIs, AJAX, JSON Data Funnels, Multi-step Workflow Tracking, Telemetry Architectures, WordPress Architecture.
 - **Project Governance & Methodologies:** Agile/Scrum, Cross-Functional Leadership, Technical Stakeholder Alignment, Product Management Lifecycle, Jira, Linear.app, Figma.
 - **Credentials & Professional Licenses:** Certified ScrumMaster (CSM), Investment Funds in Canada Certification (IFC® Certified).
-

PROFESSIONAL EXPERIENCE

Cross-Functional Team Lead

Stealth Docs Inc. | April 2026 - Present

- Confront a fragmented, legacy multi-host architecture burdened by high maintenance costs and traffic loss risks; orchestrate a zero-cost centralization strategy onto a unified platform, utilizing custom AI

scraping tools to eliminate 100% of structural 301 redirection errors.

- Identify systemic code instabilities caused by direct modifications to live server codebases; design and deploy a continuous DevOps pipeline linking GitHub version control to the core platform architecture, minimizing production crashes and achieving 100% isolation between theme modifications and structural database schemas.
- Resolve severe team-wide environment drift and onboarding bottlenecks across fragmented engineering setups; architect and distribute a containerized local workspace using Docker, standardizing setups to expedite developer environment configuration times by 60%.
- Mitigate functional navigation failures during high-stakes structural domain migrations; build and run automated validation scripts to map complex URL patterns, safely preserving 100% of high-traffic entry pages through programmatic redirection enforcement.

Financial Risk & Advisory Analyst Intern

Lambton College | Jan 2026 – Apr 2026

- Addressed suboptimal corporate structures exposing client assets to fiscal liabilities; engineered models using Section 85/LCGE to project a 5% tax rate reduction and \$368K in cumulative wealth growth over a 10-year horizon.
- Confronted unquantified reputational risks during portfolio reallocations; pioneered a proprietary "60% Rule" framework using stochastic tools to isolate asset vulnerabilities and successfully balance a 15% alternative trade-off.

Senior Software Developer

BBVA (Banco Bilbao Vizcaya Argentaria) Mexico | Jan 2023 – Oct 2024

- Confronted a fragmented architecture risking downtime during a major overhaul; coordinated 3 scrum teams through a native-to-mobile infrastructure migration, successfully safeguarding the system experience for 2M+ active digital banking users.
- Identified severe testing bottlenecks slowing software releases; spearheaded the rollout of GitHub Copilot and delivered team-wide technical enablement workshops, successfully accelerating final end-to-end testing velocity by 25%.
- Eradicated unmapped user friction points and incomplete event payloads; directed cross-functional telemetry implementations and frontend analytics pipelines, mapping multi-step user workflows into structured data funnels to track page intents.
- Addressed an expensive 3-month engineering onboarding lag; designed and facilitated weekly technical enablement bootcamps for new hires, successfully compressing employee onboarding timelines down to 30 days.
- Encountered critical frontend production bottlenecks stalling customer features; leveraged Chrome DevTools for performance analysis and accessibility testing, isolating complex root defects to deploy critical bug fixes in hours.

Product Owner

BBVA (Banco Bilbao Vizcaya Argentaria) Mexico | Mar 2022 – May 2023

- Navigated steep alignment gaps between engineering, corporate stakeholders, and directors; served as

primary technical liaison, translating complex architectural requirements into actionable business goals and canvases.

- Combated steep user drop-offs within a sensitive registration pipeline; implemented robust funnel analytics within the digital onboarding flow to resolve client-side friction, driving conversions from 1% to 30% over 9 months.
- Managed high delivery friction when bringing abstract designs to code; collaborated with the Design System team to map complex customer edge cases, accelerating the feature delivery workflow from 3 Product Increments to 1.8.

Software Expert (Front-End Developer)

BBVA (Banco Bilbao Vizcaya Argentaria) Mexico | Oct 2019 – Mar 2022

- Overcame undocumented, chaotic feature scaling across independent frontend engineering teams; standardized a reusable base-scaffold architecture and documentation framework, accelerating new component creation velocity by 50%.
- Rectified frequent runtime page slowdowns and high technical debt; refactored core framework components to maximize single-responsibility patterns, boosting system application speed by 30% and lowering defect rates by 20%.
- Audited unstable code integration practices across the development lifecycle; conducted live code reviews and pair programming sessions to enforce clean patterns, securing code integration quality gates above 80%.
- Resolved severe design-to-development silos and UI inconsistencies; authored a centralized atomic component catalogue and conducted alignment workshops with UX designers, reducing active development cycles by 15%.
- Tackled legacy jQuery layers inside Java Spring systems causing severe browser crashes; re-engineered code into modular Web Components, enabling the support desk to isolate and resolve critical UI bugs in hours instead of days.
- Circumvented unprotected deployments lacking runtime environment validation hooks; configured automated staging pipelines in Jenkinsfiles and authored custom post-install npm build scripts to execute production health checks.
- Transformed flat data feeds that obscured vital financial projections; built interactive features wrapped around complex D3.js libraries, delivering real-time, intuitive visual portfolio tracking for millions of active users.
- Mitigated poor code regression coverage before delivery handoffs; established a rigorous automated testing workflow using Mocha, Chai, and Selenium E2E scripts, securing code integration quality gates above an 80% threshold.

Senior Frontend Developer & UI Lead

Various Agency & Consulting Roles (Codice / Independent) Mexico | 2010 – 2019

- Combated cross-device layout fragmentation across major brand portals; built responsive UI guidelines and bridged static designs with dynamic MySQL inputs, delivering stable production software builds for Tier-1 enterprise clients.
- Neutralized asynchronous data bottlenecks inherent to early-stage blockchain platforms; architected decoupled Single Page Applications and optimized REST API consumption, delivering high-performance,

low-latency interfaces.

- Reconciled compounding technical debt and stalled deployments left by legacy webmasters; translated requirements into clean HTML/JS codebases and standardized DNS hosting, successfully deploying 100% of backlogged projects.

PROJECTS

Personal Portfolio & Branding PWA | *Next.js, Vercel, Cloudflare, GitHub Actions* | Ongoing

- Bypassed heavy corporate CMS overhead and latency bottlenecks; architected a high-performance, Server-Side Rendered PWA using Next.js, integrating GitHub Actions with Vercel's edge network for swift production delivery.
- Deflected expensive cloud hosting and complex data dependencies; engineered a server-side Markdown-to-HTML conversion pipeline with Cloudflare protection and automated email routing under a strict zero-cost infrastructure plan.
- Countered low organic ranking and visibility across modern search networks; optimized technical SEO structures and semantic layouts, maximizing discoverability for AI-driven answer engine crawlers (AEO/GEO).

Autonomous Job-Hunt Engine & Daemon | *Python, Ollama, SQLite, GCP API* | Ongoing

- Eliminated high manual overhead when collecting and organizing local listings; developed a background daemon using Spec-Driven Development (SDD) to automate ingestion and parsing via Firecrawl scraping engines.
- Isolated slow, repetitive resume personalization workflows; integrated localized LLMs via Ollama to programmatically cross-reference posting metadata against a personal profile, automating customized asset delivery.
- Streamlined disorganized application pipelines; constructed an automated operational workflow using an SQLite database alongside Google Cloud APIs (Drive and Gmail) to orchestrate and distribute real-time briefings.
- Secured vulnerable integration points prone to piping data failures; mapped secure, API-driven routing loops to manage transfer between Python backends and downstream GCP infrastructure, mirroring enterprise CRM patterns.

VOLUNTEERING

Route Captain | CN Cycle for CHEO | Ottawa, ON | May 2026

- Supervised emergency safety execution risks for a high-volume public gathering; directed physical operations for 6,000+ participants, driving real-time perimeter tracking and rapid asset placement with event marshals.
- Balanced unpredictable route changes and team deployment chaos; empowered field assistants with high situational awareness, delivering precise timeline directives and logistics tracking to build a resilient ecosystem.
